Professional Summary

Full Stack Developer and founder of Reuel's Web Services, a mid-level professional with a track record of delivering production-grade applications. Architected and launched Pongs Shipping, a freight-forwarding platform that streamlined operations for a team of 6-15, and built Jewels and Time, a headless CMS and storefront that replaced an underperforming WooCommerce site. Proficient in the React/Node/PostgreSQL stack, cloud infrastructure, real-time systems, and CI/CD pipelines. Eager to apply this expertise to accelerate product development and improve operational efficiency for a growth-focused organization.

Technical Skills

- **Programming Languages:** TypeScript, JavaScript, Python, Java, PHP, C#, C, Ruby
- **Frontend:** React, Next.js, Vue.js, Angular, Tailwind, Tanstack, Zustand, Zod, shaden/ui
- **Backend:** Node.js, Express, Fastify, PostgreSQL, MongoDB, Redis, BullMQ, Anthropic API, OpenAI API, PrismaORM
- **Tools and Software:** Git, Docker, Turborepo, Railway, Vercel, AWS (S3, SES, CloudFront), Sentry, Uptime Robot
- **DevOps and CI/CD Tools:** GitHub Actions, GitLab, VSCode, AWS, ESLint, Prettier
- **Core Competencies:** Full Stack Development, REST API Design, PWA & Offline-First Architecture, Cloud Infrastructure, Database Design, AI Integration

Experience

Reuel's Web Services

2023 - Present

Founder & Full Stack Developer

Founded and currently operates a freelance software development consultancy serving local and regional clients across Jamaica and the Caribbean. Responsible for the full project lifecycle on every engagement: scoping requirements, architecting the frontend and backend systems, building and testing, deploying to production, and handing over to the client. Every project ships as a real product with real users.

- Architected and launched Pongs Shipping (pongsshipping.com), a full-featured freight forwarding and logistics platform, by engineering end-to-end shipment lifecycle management from pre-alert submission to in-country collection, eliminating spreadsheet-based tracking for a team of 6–15 staff and centralizing operations into a single real-time system.
- Delivered Jewels and Time, a custom headless CMS and storefront to replace an underperforming WooCommerce setup, by building an intuitive product management system handling 100+ SKUs with auto-generated SEO meta tags and smart slug creation, and introducing a lead scoring algorithm that replaced pen-and-paper contact tracking, giving the client their first structured sales pipeline.
- Built Rasta Collections (rastacollections.store) from the ground up for a client with no prior web presence by engineering a custom storefront and CMS that mirrors a full e-commerce experience while routing purchases through existing eBay listings. This eliminated the need for payment infrastructure while establishing a professional brand presence.
- Developed and launched Dutchie (dutchpot.online), a Caribbean recipe platform, by designing a reputation-based content system that let users submit and rate recipes, ensuring authentic content and delivering a production-ready full-stack application that is now actively used by the community
- Designed and delivered ByteGrade, an AI-powered automated code grading system, by building a full-stack React / C# .NET application integrated with the OpenAI API to automatically grade submissions, generate structured feedback, and detect plagiarism. It was validated through a 93% response rate survey of 280 students and live lecturer testing, directly replacing UTech's manual grading process and a basic autograder that provided no qualitative feedback.

Education

University of Technology, Jamaica

2019 - 2025

Bachelor of Science, Computer Science
